celkem 45 rébusů

RÉBUS NA KAŽDÝ TÝDEN

Všechna zadání jsou z internetové stránky <https://cz.puzzle-shikaku.com/> Já si je vyřešila a uspořádala, aby se pouze namnožily.

Chtěla jsem vyplnit čas šestáků, kteří dokončili písemku a koukali kolem, proto jsem jim ukázala několik rébusů. Stejně jsem postupovala i u devátáků a i tam někteří s nadšením řešili. Proto jsem si na celý rok vytvořila zásobu, kterou s Vámi chci sdílet.

Obsah

- celkem 45 rébusů,
- 5 typů rébusů, ke každému 8 zadání + velký SPECIÁL,
 - první 3 lehké obtížnosti, malá velikost,
 - následující 2 těžké obtížnosti, malá velikost,
 - následující 2 lehké obtížnosti, střední velikost,
 - poslední 1 těžké obtížnosti, střední velikost,
 - speciál je lehké obtížnosti, velká velikost,
- ke každému strana A4 s pravidly řešení a několik vyřešených rébusů, jejichž zadání namnožena na A4 pro žáky k vyzkoušení.
- tabulka k evidenci řešitelů a vyřešených rébusů.

Způsoby práce

- na nástěnku, na konci hodiny, po písemce pro hotové žáky, do semináře, kdekoli kde najdete využití.
- Osvědčilo se mi v hodině s žáky (6. i 9. ročník) vyluštit několik úloh, kde jsme si postupně zdůvodňovali proč je jaké řešení možné a nemožné, k těmto účelům do listů s pravidly hry přikládám několik jednoduchých zadání s řešením.
- Nechávala jsem si je vytištěné u sebe, ale později jsem já i žáci ztráceli přehled kdo co vyřešil, proto doporučuji někam na nástěnku vyvěsit tabulku, kde si žáci sami evidují co vyřešili, (návrh nabízím na konci materiálu).
- Ideálně pokud na stejné místo s evidenčním listem můžete umístit i rébusy, postupně je přidávat a doplňovat chybějící.
- V jednotlivých typech se se zvyšujícím číslem zadání zvyšuje i obtížnost, SPECIÁL je třešničkou pro nadšence.

Líbí se Vám materiál, nebo se mi něco nepovedlo?

Pochvaly i kritiku, která povede ke zlepšení materiálu, mi můžete posílat na mail:
sikova.kat@gmail.com

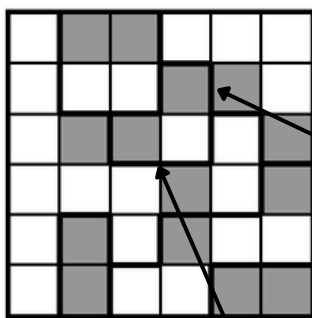

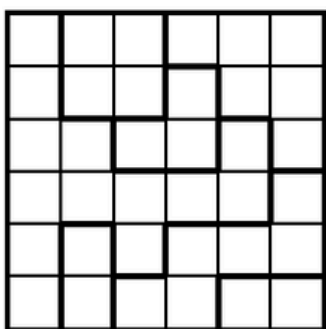

NORINORI

Pravidla hry:

Dominem se rozumí začerněná dvojice sousedních políček

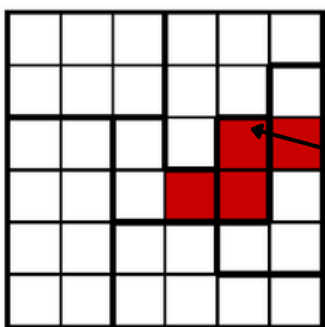

1. Úkolem je začernit některá políčka herního pole, aby byly splněny tyto podmínky:

- V každé ohraničené oblasti jsou začerněna právě 2 políčka.
- Domino může být položeno přes hranici oblastí.
- Domina se nesmí dotýkat hranami. Mohou se ale dotýkat v rozích.

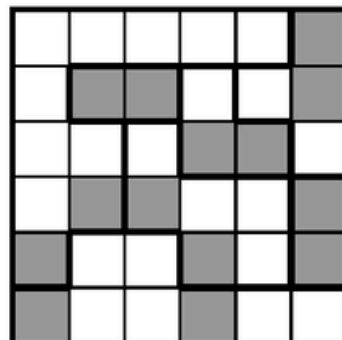

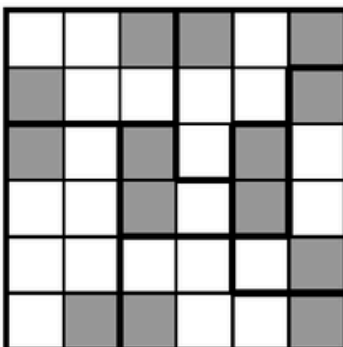

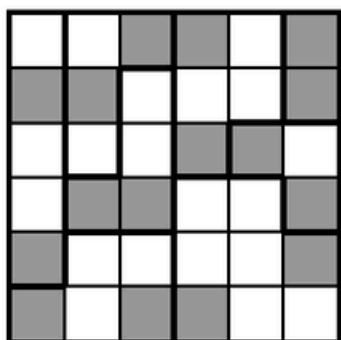

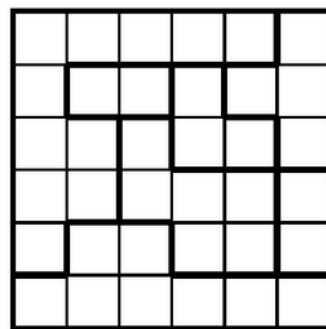

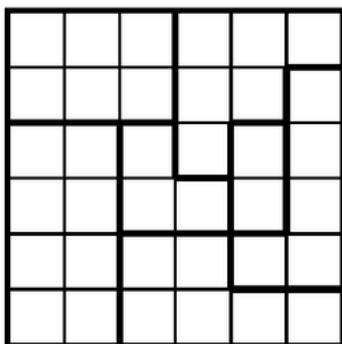

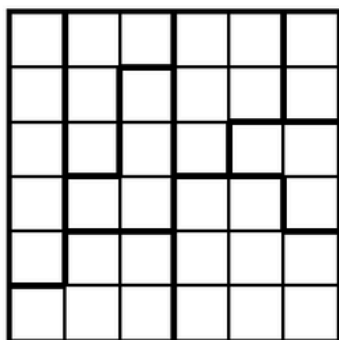

domino může být položeno přes hranici dvou oblastí

mohou se dotýkat rohy

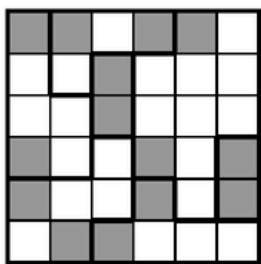

nelze, protože se tohoto čtverečku dotýkají další 2 čtverečky zprava a zdola a další, tedy 3 čtvereček diagonálně. Pravidla říkají, že dotyk mohou mít právě 2 čtverečky.

NĚKOLIK SPRÁVNĚ VYŘEŠENÝCH RÉBUSŮ.

LITS

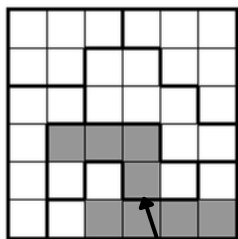

Pravidla hry:

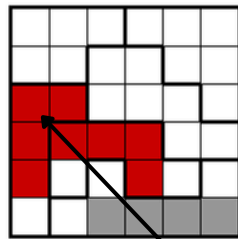

Tetromino je tvar složený ze 4 spojených čtverců. Existuje 5 typů tetromin, které jsou obvykle pojmenovány L, I, T, S a O, na základě jejich tvaru. O tetromino se v tomto puzzle nepoužívá, protože má tvar 2x2, což není povoleno.

1. Do každé oblasti musíte umístit jedno tetromino tak, aby:

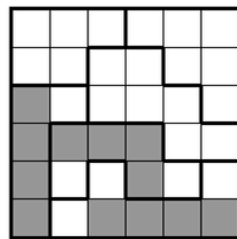

- a. 2 tetromina stejného typu se nemohou vzájemně dotýkat vodorovně ani svisle. Otočení a odrazy se počítají jako shoda.
- b. Stínované buňky by měly tvořit jednu spojenou oblast.
- c. Tetromino 2x2, tedy tvar O, není povole.

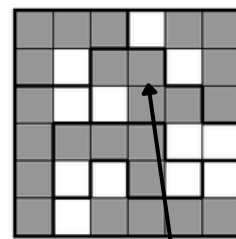

dvě tetrimina ze dvou oblastí se mohou dotýkat

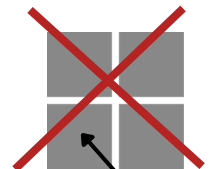

Zde vzniklo tetromino ve tvaru O, které není povoleno

to je v pořádku

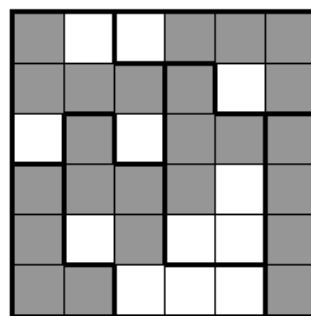

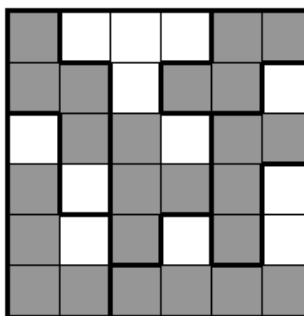

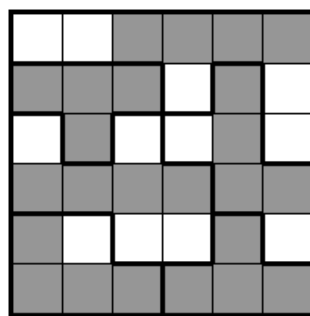

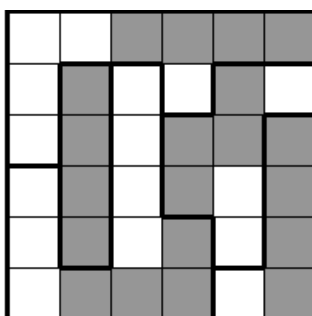

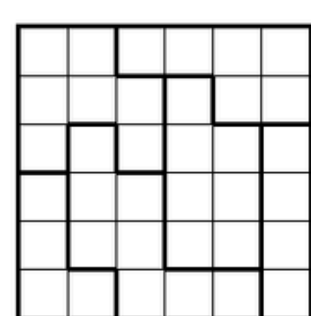

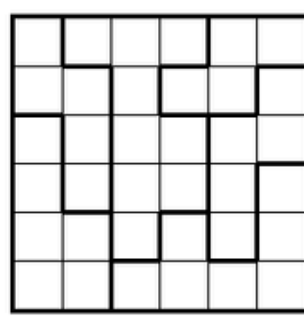

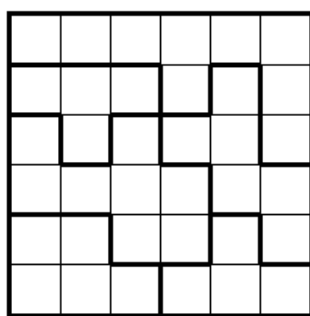

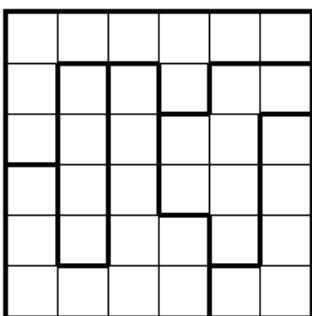

tetromino ve tvaru S lze převracet

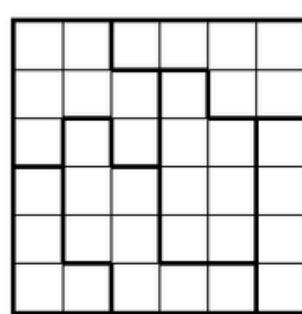

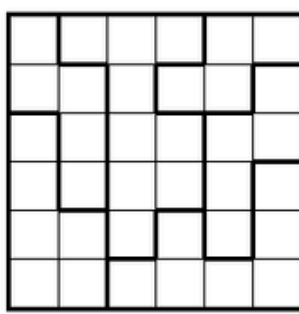

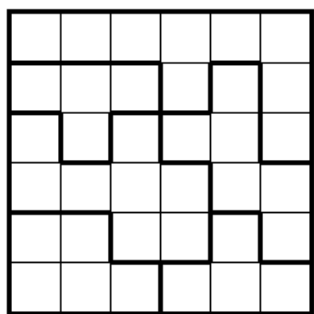

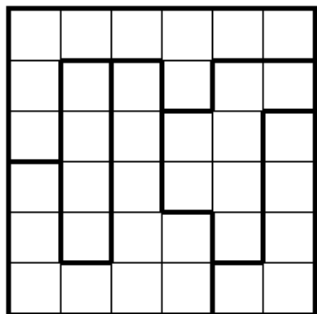

Tetromino ve tvaru O

BATTLESHIPS

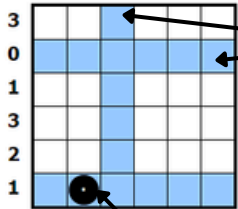

Pravidla hry:

Musíte najít umístění bitevních lodí ukrytých v mřížce. Některé bitevní lodě mohou být již částečně předvyplněny.

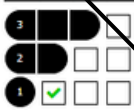

1. Čísla mimo mřížku ukazují počet buněk obsazených bitevními loděmi v daném řádku/sloupci.
2. Bitevní loď je přímá linie po sobě jdoucích černých buněk.
3. Počet bitevních lodí z o dané velikosti je uveden v legendě pod mřížkou.
4. 2 bitevní lodě se nemohou navzájem dotýkat (ani diagonálně)

předvyplněné pole vody

2 2 0 4 1 1

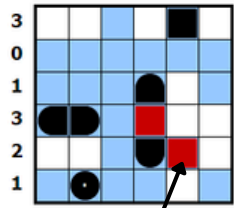

zde s jistotou nebude žádná část lodi, proto rovnou mohou "vyškrtnat"

předvyplněná loď

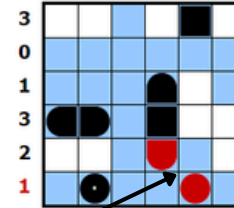

2 2 0 4 1 1

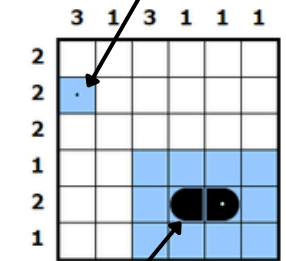

části lodí nemohou být vedle sebe, ani diagonálně

2 2 0 4 1 1

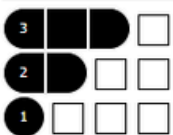

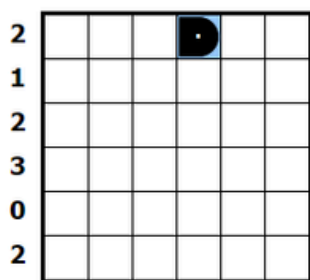

pokud mám jistotu, že loď musí být jedině na tomto místě, okolí lodi si mohou rovnou vyškrtnat, protože tam žádná další loď být nesmí.

NURIKABE

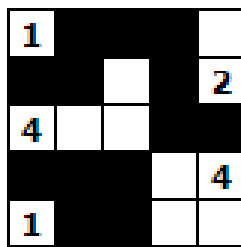

Pravidla hry:

Plánek tvoří čtvercová síť, ve které jsou do některých políček vepsána čísla. Tato čísla označují počet políček, která tvoří „ostrov“. Ostrovy obklopuje „voda“.

1. Políčka tvořící ostrovy musí být spojena stranami a jednotlivé ostrovy se smí dotýkat pouze rohem.
2. Voda nesmí utvořit čtverec nebo obdélník a na celém hracím plánu musí vytvořit spojenou plochu.

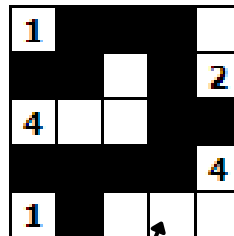

kolem ostrovů s číslem 1 bude jistě voda, ale ostrovy (bílé pole) se mohou rohy dotýkat, proto diagonální pole okolo "1" nechávám bílá

"voda" nesmí tvořit čtverec nebo obdélník!!!

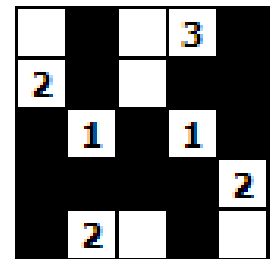

správně vyřešené

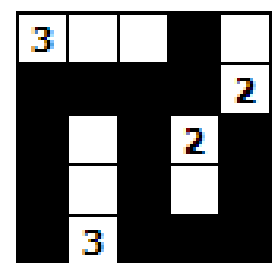

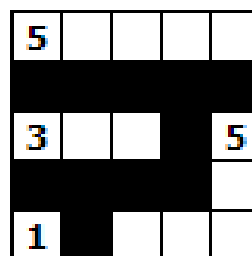

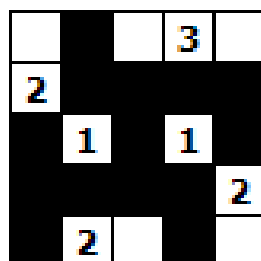

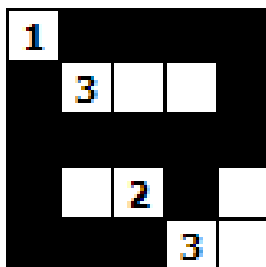

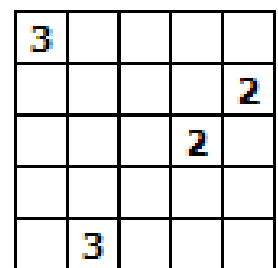

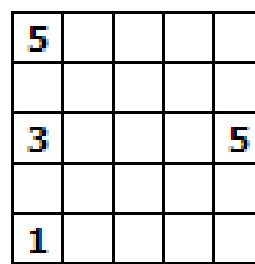

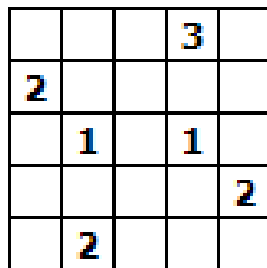

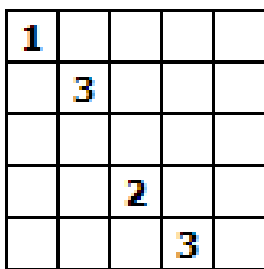

ostrovy se mohou tvořit do "zatáčky"

"ostrov" může být čtvercem

voda (černá pole) musí tvořit souvislou plochu. Musí se dotýkat celou stranou. Ne jen rohy.

NĚKOLIK SPRÁVNĚ VYŘEŠENÝCH RÉBUSŮ.
